Key knowledge – What is a habitat?

Living things need a habitat where all their basic needs are met. They need water, food and air. They need to find these things in their habitat or they will die.

Key knowledge – How do chicks hatch from an egg?

Each day, over the 21 days of **incubation**, the baby chick develops. **Incubation** is how the chick grows in an egg.

On day 21, the chick **hatches** using its **egg tooth** which dries and falls off.

Key knowledge – What is a life cycle?

All living things have a life cycle that includes being **born**, developing into an **adult**, **reproducing** (having babies), and eventually **dying**. During their lifetime humans experience growth and development.
