Tree	Shrub	Herb	Bush
			

Key knowledge – How are seeds dispersed?

seeds can be dispersed in a variety of ways.

Some seeds are transported by the wind.
Some plants growing near rivers may transport their seeds using the flowing water.
Some seeds are exploded a good distance away from the parent plant.

Key knowledge – Why are plants important to humans?

Plants need **air**, they take in carbon dioxide and release oxygen.
Humans do the opposite of this as they take in oxygen and release carbon dioxide.
